## About Virtual Magnifying Glass

Virtual Magnifying Glass is designed for visually-impaired and others who need to magnify a part of the screen. Unlike most similar programs it does not open a separate window for the magnification but instead puts a movable magnifying glass on screen.

This software is the multiplatform version of Virtual Magnifying Glass, specifically this is the Linux port. Any feedback you can give us about this software will be greatly appreciated and can greatly enhance the quality of the software. You can give us feedback on our source-forge page: <http://sourceforge.net/projects/magnifier>

## Licence

Virtual Magnifying Glass is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License version 2 as published by the Free Software Foundation.

Virtual Magnifying Glass is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

Please note that the General Public License version 2 does not permit incorporating Virtual Magnifying Glass into proprietary programs.

## Installation Guide

Just follow the steps in the order they appear. If you need help installing, go to our website (<http://sourceforge.net/projects/magnifier>) and describe your problem.

- 1 - Download magnifier-gtk2.tar.bz2 file to a known location
- 2 - Open a terminal session and change to root by issuing the "su" command
- 3 - Go to the directory where the package was downloaded
- 4 - Uncompress the file with the command: "tar -jxvf magnifier-gtk2.tar.bz2" e enter the directory which is created with "cd magnifier-gtk2"
- 5 - Run the install script: ./install.sh
- 6 - If you wish to create a link on the desktop just type:  
ln -s /usr/share/magnifier/magnifier /home/<user>/Desktop/magnifier

In case you receive error messages, check if all the dependencies of the program are installed.

Note: There is also a uninstall script called uninstall.sh

Another Note: If your distribution doesn't use the standard directories for Install, please run magnifier once so it will create a .magnifier.conf file on your user directory (most times /home/username). Now edit that file and change the MyDirectory field to the correct location.

**Important Note: In case you have problems executing the program, please run it from the command line so you can see any error messages.**

## Dependencies

This are the most important dependencies of the software:

- GTK 2.0 or superior
- libgdk\_lixbuf2.0
- ImageMagick command line tools

You can see a complete list of .so files needed by the software using the command:

```
ldd magnifier
```

In case you cannot run the program and it displays a message saying it cannot find one of this libraries (you must run the program from the command line to see error messages), you need to download and install a package for the necessary library:

On RPM-based distributions you can find packages here: <http://rpm.pbone.net/>

On Debian-based distributions you can find packages here:  
<http://www.debian.org/distrib/packages>

## Using the Glass

Just move the cursor and the glass will follow it, enlarging the background with variable magnification from 1x to 8x.

New features on the 3.2 version:

- Now magnifier works with a system tray icon, so when you click the glass it won't instantaneously quit. You can right-click the system tray icon to configure the software, show the glass or exit it.
- You can change the magnification (from 1x to 8x) using the system tray icon.
- New Anti-Aliasing option on the systray icon menu.

New features on the 3.1 version:

- Move and configure the glass using the keyboard:

<i>Key</i>	<i>Command</i>
[ ENTER ] or [ ESC ]	Hides the glass
Q	Closes the application
Up Arrow	Increases the lens height
Down Arrow	Decreases the lens height
Right Arrow	Increases the lens width
Left Arrow	Decreases the lens width
W	Moves the lens up
S	Moves the lens down
D	Moves the lens to the right
A	Moves the lens to the left
[ PAGE UP ]	Moves the lens up in big steps
[ PAGE DOWN ]	Moves the lens down in big steps
B	Activates and Deactivates the graphical border
