Dear Valued Customer,

For many years, **RX7i, Series 90™-30, and Genius™ I/O** have provided industry leaders around the world with modular, scalable and easy automation control options. Though production ended many years ago, we hope they have helped you achieve success in your organization.

While Emerson focuses on and invests in its latest control platforms, we understand these are unprecedented times and are making available **a limited amount of reserve inventory of some of the aforementioned discontinued products to our most valued customers on a first-come, first-served basis through October 30 while supplies last.** We understand the importance of keeping critical industries running and maintaining discounted systems can be a challenge when resources are limited. We encourage you to purchase these **limited-quantity**, discontinued products from Emerson before they are gone. Offer not valid in Brazil or Europe.

- Legacy products are being offered at 20% off list price
- Products are sold with a 100-days product warranty

You can purchase these retired products now to support your existing systems and complete your migration to the PACSystems™ RX3i controller at your own pace. To further extend the life of your retired products and bridge the support gap while you determine when to modernize, please consider enrolling in Emerson's **Sustain Program**, which offers extended repair and remanufactured support of these products.

Our modern solutions include a complete offering for machine-level and industrial controls with products such as PACSystems™, PACMotion™, PACEdge™, VersaMax™, and comprehensive HMI and operator interface options, which will remain powerful integrated or standalone technologies for OEM and end user machinery and edge applications.

Emerson is investing in our portfolio and the ability of our control systems to bring new capabilities to help organizations optimize their capital project and operations performance. We will continue to expand our automation expertise by bringing new automation and digital solutions to market that will integrate plants seamlessly and accelerate improvements in operational performance, safety and reliability.

We invite you to contact your nearest authorized channel partner or Emerson sales representative to learn more. Thank you for your continued business with Emerson. We look forward to meeting your needs as you support your customers.

Join the Emerson Community [here](#) to keep up with webinars, product launches and other news.

Best regards,
