to ensure your success  
with automation*

## SCADA/Enterprise Manufacturing Intelligence/Software

Over 30 products geared toward gathering, historizing, and displaying plant data to enable better-informed business decisions

Control systems for critical hazardous operation along with down-time minimizing migration strategies for modernizing competitive DCS

Connects HMI and SCADA software via 25 protocols to thousands of different devices

Custom maintenance/asset management software with SCADA integration

Video surveillance & console recording over nearly any type of network (even fieldbus)

Solutions in industrial software including Active X controls, DDE servers, OPC servers, and development toolkits

Version control software minimizes downtime and safety issues by maintaining Systems Platform, HMI, PLC and other programs

Notifies the right people at the right time about alarms via telephone, email, paging, and 2-way messaging

## Industrial Computing

We partner with several manufactures to deliver your industrial computing hardware needs, including: Panel PCs, Factory Displays, Thin Clients, Rackmount PCs/Servers, Box PCs ,and Tablets

Thin client management plus a host of added features not expected from a thin client

Fault tolerant computer servers with built-in hardware redundancy and software

Displays and peripherals for industrial computing applications

## Drives & Motors

Easy to configure AC/DC VFDs with several families allowing a match between your price point vs. performance needs

Protect your drive & motor investments with reactors and filters

Energy efficient UL motors including the popular Super-E family

## Machine Control / Safety & Data Acquisition

Innovative PLCs, PACs, I/O, and safety products combine affordability, reliability, and performance

Physically and programmatically integrated HMI/PLC combos plus free traditional and IEC 61131-3 programming software

Patented solutions for increasing safety while decrease hardware costs

Remote I/O and RTUs with ease of use and cost top of mind

PLC solutions ideal for process control plus solutions that extend the life of your existing TI-505 investment

Smart configurable I/O programmable in IEC61131-3

Offers a wide range of fieldbus-enabled metering devices for energy monitoring and management

Programmable I/O, IS barriers, RFID and sensors

## Human Machine Interface & OIT

Full-featured HMI solutions with easy integration within larger SCADA systems

Choose from fast, distributed, or full-featured HMI solutions with USA made hardware

High-end HMI's (with or without control) with integrated development with GE PLC/PAC products

Affordable HMIs and OITs with an even more affordable development environment

## Communication & Networking

Licensed & unlicensed data radios and wireless I/O

Fieldbus cabling & I/O nodes, switches, and Ethernet in assorted packages

Secure, remote management for programming, control, and data logging

High capacity, narrow band point-to-multipoint radios for SCADA and telemetry applications

Ethernet switches, routers, protocol converters, video, USB, cellular, and embedded computers

Protocol converters and modems (including cellular) for varied application

Reliable, secure, and scalable wireless IP mesh networks for field applications

Full line of Ethernet products, plus protocol converters for many applications

## Precision Motion Control & Mechanical Components

Complete motion solutions including everything from the mechanics to the controller and HMI

Programmable motion controllers, drives and motors

Packaged servo motor, drive, and controller physically integrated for simplicity and panel space benefits

Extreme environment servo motors plus repair solutions for competitive obsolete offerings

Brushless AC servos, digital amplifiers, linear motors, direct drive motors, and multi-axis controllers

Affordable and robust gearheads for servos that provide high precision with a standard 5 year warranty and short lead times

Stepper motor, drive, and controller physically integrated for simplicity, panel space, and costs savings

Manufacturer of ball screws, linear actuators, linear motion modules, linear motors, guideways, encoders, and drive motors

## Panel Equipment

One-stop-shop for circuit breakers, motor starters, pilot devices, and soft starts

Compact high-efficiency cabinet power supplies

Filter fans, air conditioners, heaters, and thermostats protecting your panel investment

Polycarbonate enclosures for industrial applications

Carbon and stainless steel enclosures optionally customized for your application

Sealing systems for cables and pipes

## Logic Responsibility

Every individual at Logic, Inc. will stand behind the decision to promote a given product or solution, and any member has the authority to bring in others who may have more expertise in a given field. We work as a team to provide you products and solutions that fit your needs.

## Logic Technical Foundation

We commit to having extensive first-hand knowledge of the products and technologies we promote. To this end, we engage our personnel in detailed manufacturers' training, in-house product set-up and mastery, as well as on-site demonstrations of customer-specific solutions.

## Logic Bottom Line

Our success depends on your success. You have the vision and the details of your desired outcome — we have the technologies to make it a reality. We will only recommend solutions that fit for your situation and organization.
