

Maximizing the Value of Your Operational Data

Elliott Middleton

Product Manager, AVEVA Group plc

25 April 2018

The Schneider Electric industrial software business and AVEVA have merged to trade as AVEVA Group plc, a UK listed company.
The Schneider Electric and Life Is On trademarks are owned by Schneider Electric and are being licensed to AVEVA by Schneider Electric.

How to find?

- Motor starts
- Duty cycle

Wonderware InTouch

- World's Favorite HMI
- Includes
 - Data Acquisition
 - Simple historical logging (LGH)
 - Basic trend
 - CSV export

Wonderware Historian

- Full-featured Historian
- Includes
 - Data Acquisition
 - Rich transformation
 - Scalable from 100s to millions of tags
- Over 80,000 sold

Transformation Example: Drive

1
0

- Motor starts
- Duty cycle
 - Average
 - Shortest stop
 - Shortest run

Cycle Times

Transformation Example: Downtime

- Downtime Statistics
 - Total (split or not)
 - Longest
 - Shortest
- Mean Time Between Failure
- Mean Time To Repair

Transformation Example: Counter

- Calculate amount of increase
 - Rollover
 - Reset
 - Reverse

Breadth Of Data

Discrete
(Boolean)

Analog
(floating point,
integer)

Aa

String
(512 characters)

$\Sigma\mu$

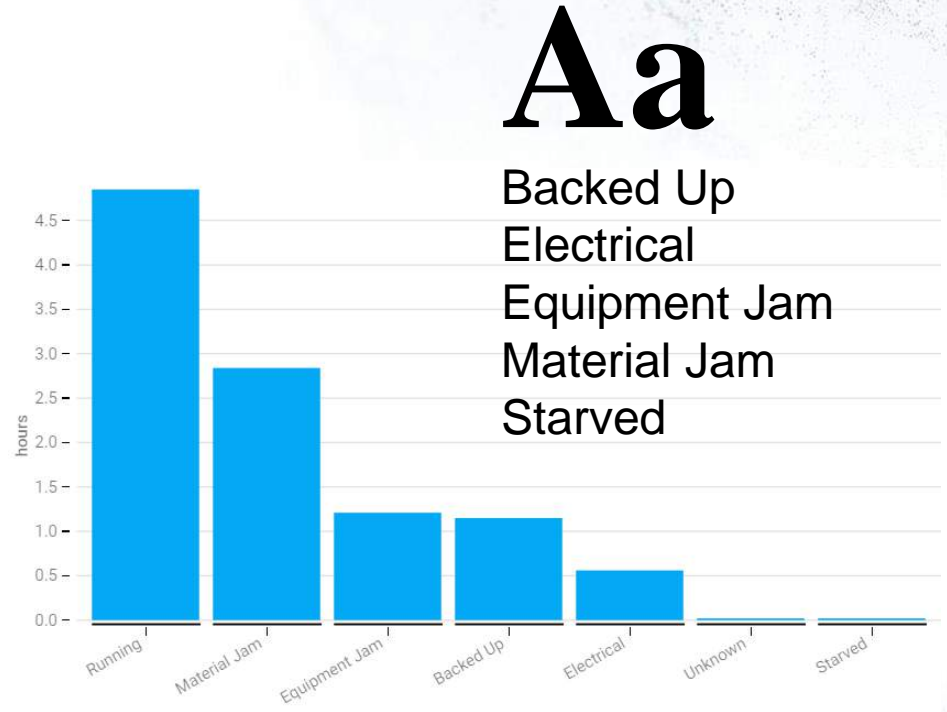

Summary
(Analog & State)

Alarms
(structured time series)

Simple Utilization

- Historize Downtime Reason
 - String or integer tag
 - Accurately records micro-stops
 - State summary calculates statistics
- View As A Pareto
 - In InSight
 - Custom charts

Scenarios Guide

Scenario 7: Pinpoint reasons for downtime

You can use State Summary information to help you answer questions like:

- How much downtime was due to feeder jams?
- What else is causing downtime?

What is State Summary Data?

State summary data summarizes the states of a tag value. You can use this to analyze process variables with a limited number of states, such as a machine's state of running/starting/stopping/off or a string that represents a downtime reason.

For each distinct state within a cycle, state summary replication also provides:

- Total time
- Percent of the cycle
- Shortest time
- Longest time
- Average time

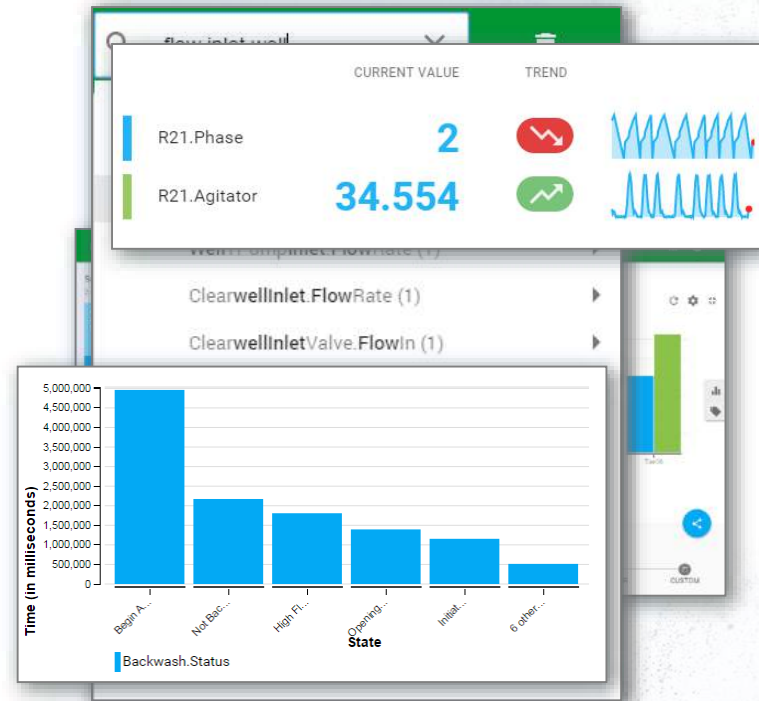

Using the StateSummaryHistory View

You can use the StateSummaryHistory view to retrieve state summary data.

A state summary results in a series of values, each representing a different state, for the same tag and time period. You configure the maximum states when you create the state summary tag. For more information, see the [State Summary Replication](#) section in the *Wonderware Historian Server Concepts*

Simple Browser Access: InSight

- Casual User/Supervisor
 - Not familiar with tag names
 - Initial interest is a summary view
 - Others can still use Historian Client Trend
- Selection: Search-based
- Summary Views
 - Harnesses the power of “retrieval modes”
 - Without requiring a training course

High-Speed Operations

Step	Label
1	Load
2	Open
3	Fill
4	Settle
5	Close
6	Seal
7	Release

Target 2.5 bags/minute

Actual 3.5 bags/minute

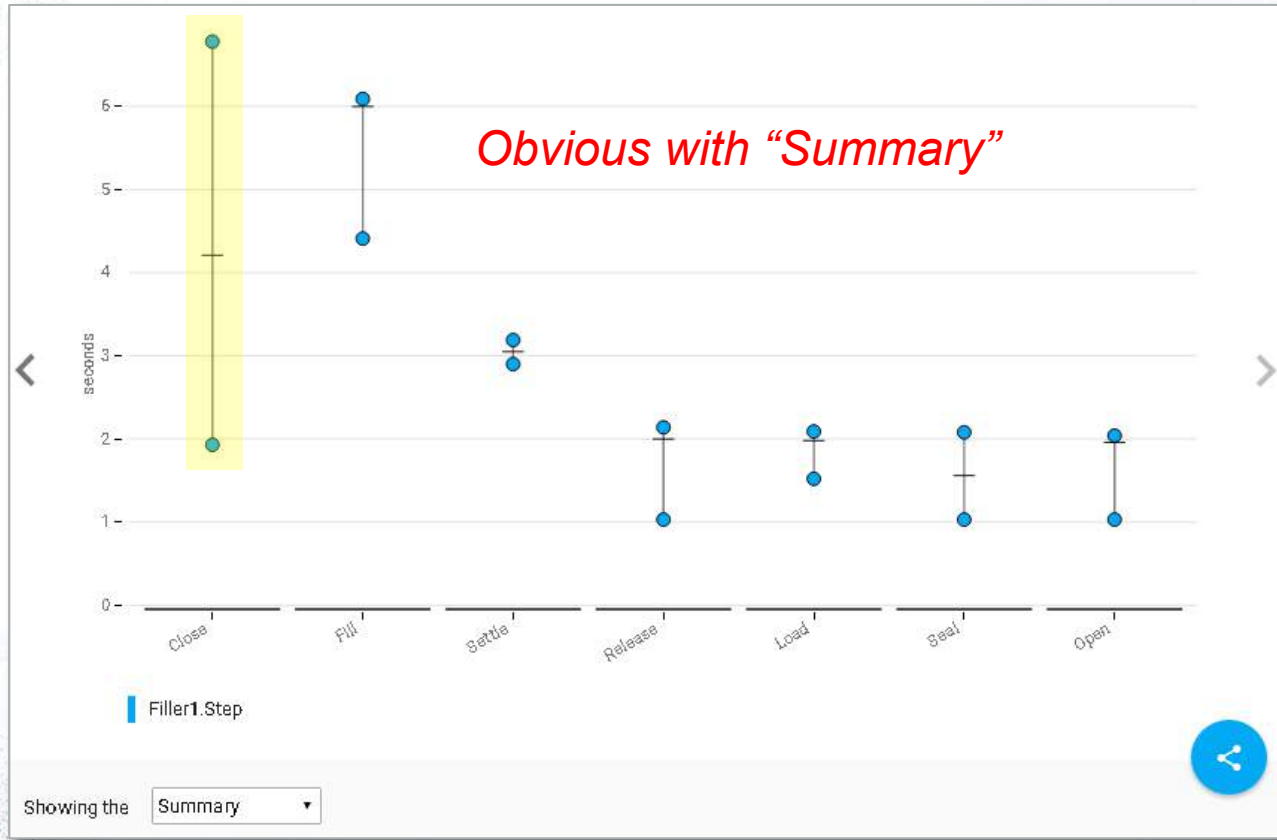

High-Speed Operations

Step	Label
1	Load
2	Open
3	Fill
4	Settle
5	Close
6	Seal
7	Release

Where's the opportunity?
Could increase throughput ~20%
At \$250 per bag → ~\$720K/day

Easier To Spot With InSight Time-In-State

InSight Deployment Implications

Single port
Outbound only
Meets NERC CIP

- Business User Access
 - Restricted access to control network
 - Isolated domains
- Network Isolation
 - Software “data diode”
 - Independent domains
 - Guaranteed “read-only”
 - InTouch Graphics, too

Alarm History In Historian

- Performance

- Significantly higher storage rates
- Capacity limited by disk space, not insertion rate

- Easier To Manage

- Archive/purge/restore using Windows Explorer
- No need to purge to sustain storage

Comments/Annotations

The screenshot shows a comment entry form with the following fields:

Type	Comment
Time	1/26/2018 9:55:13 am
Modified	1/26/2018 10:31:39 am
By User	WIN10VM\vmAdmin
Why is this mixing so fast?	
Visible to	Team

The screenshot displays a 'Tag Picker' window on the left and a 'Trend' chart on the right. The 'Tag Picker' window lists various tags with their descriptions:

Tag Name	Description
R21.Agitator	Agitator speed in r
R21.Bath	Detector with bats
R21.FlowIn	Flow rate into rea
R21.FlowOut	Flow rate out of re
R21.FlowRate	accumulated flow
R21.Level	Level in reactor R2
R21.Phase	Switch phase in rec
R21.Product	Product currently
R21.Temp	Temperature in re
R21.ValveIn	Drain valve positio
R21.ValveOut	Inlet valve positio

The 'Trend' chart shows data for 'LOCALHOST:R21.Agitator' over a 17-hour period. A red vertical line marks the time 1/26/2018 9:55:13 AM. A text box is overlaid on the chart with the following text:

LOCALHOST:R21.Agitator
Why is this mixing so fast?

How Customers Use Historian

Amazing Feedback!

A Global 500 food company increased its uptime by 5-10% with Wonderware Historian.

“Wonderware Historian has brought integrity and reliability to our organization.”
– Optimization Engineer, Large Manufacturing Company

“Fast access to real time and history data that provides insights to process control.”
– Process Engineer, Fortune 500 Construction Company

“Wonderware Historian allows for a centralized, enterprise approach to collecting and analyzing data.”
– IT Director, State & Local Government

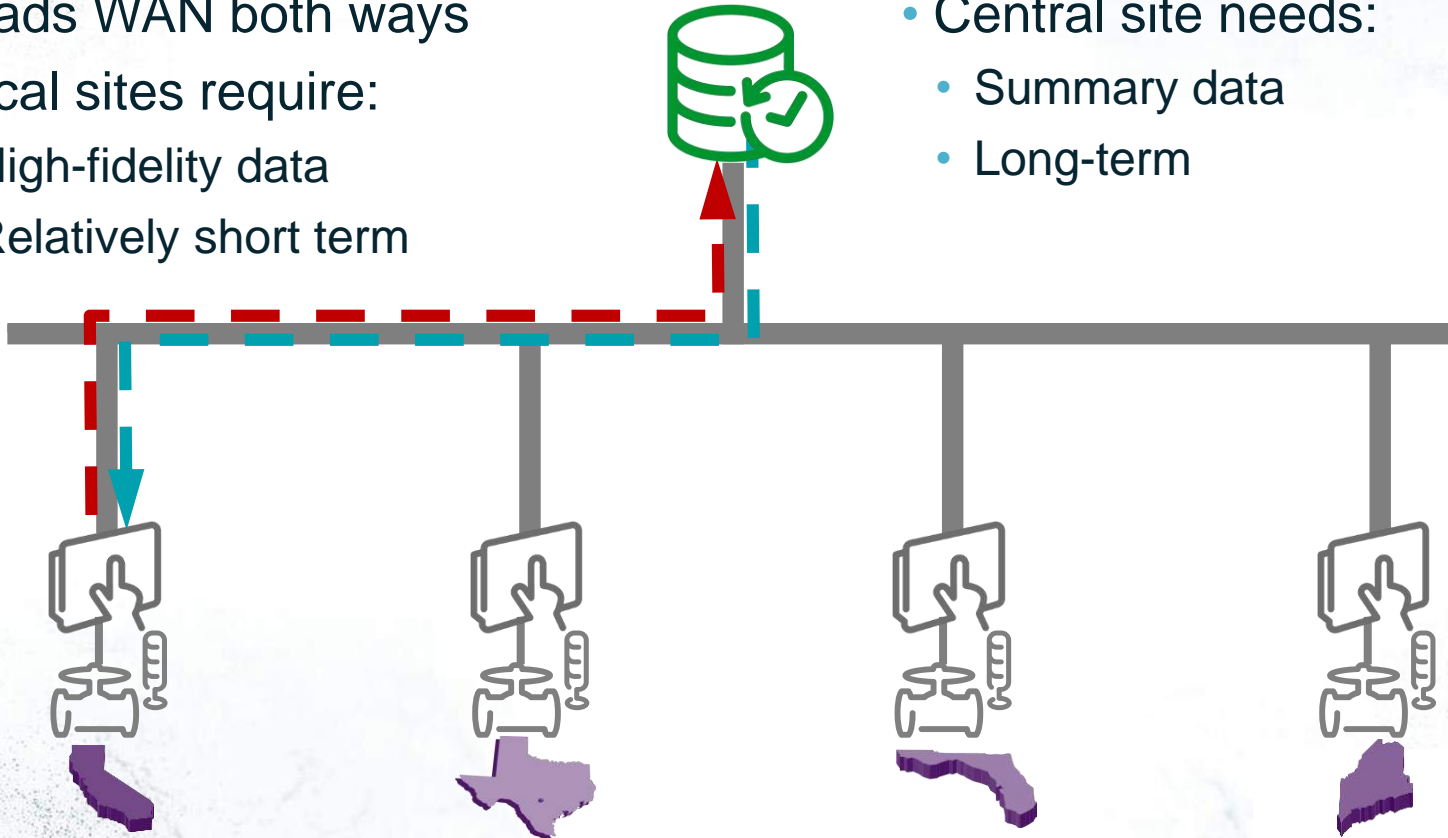

“We found the problem very quickly with an important compressor with [Wonderware Historian].”
– Engineering Management, Oil & Gas

Historian 2014 R2 SP1 Patch 1

This slide has an embedded video

Centralized Historian

- Loads WAN both ways
- Local sites require:
 - High-fidelity data
 - Relatively short term

- Central site needs:
 - Summary data
 - Long-term

Distributed Historian Architecture

- Locally keep:

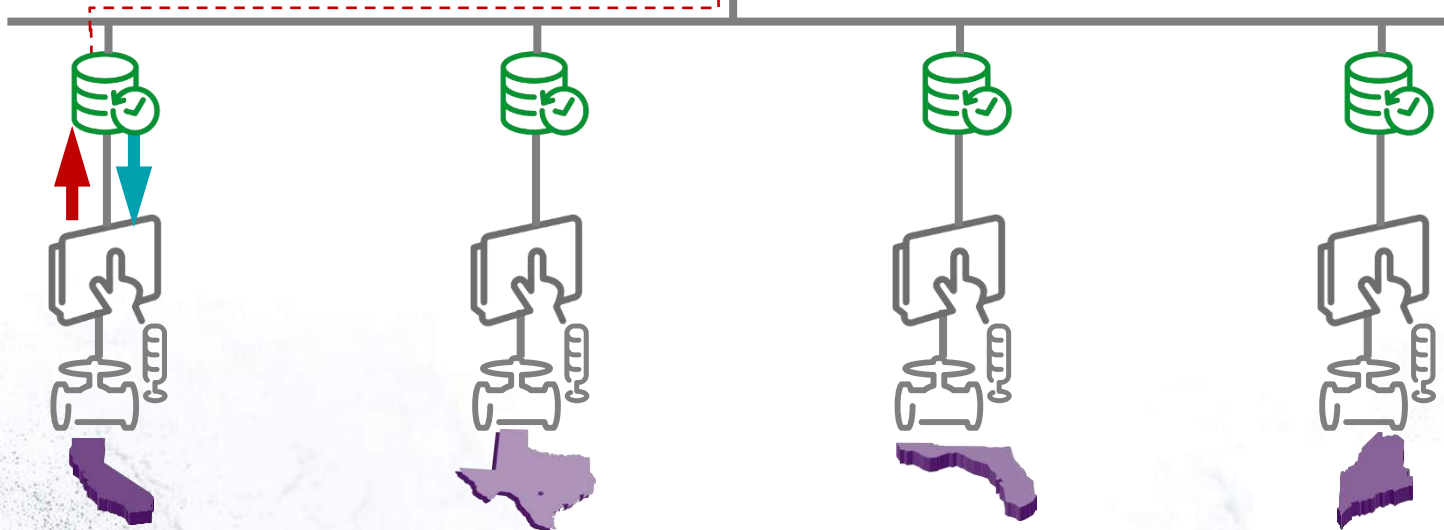

- High-fidelity data
- Relatively short term

- Replicate to Central

- Central holds:

- Summary data
- Long-term

Distributed Historian Architecture

- Process History
- On-premise Historian
- Wonderware Historian

- Alarm & Event History in 2017
- Wonderware Historian
- Wonderware Online InSight

The screenshot shows a 'New Replication Server' dialog box with the following fields:

- Node Name/IP Address: MyT2
- Description: (empty)
- Store & Forward path: C:\Historian\StoreForward\MyT2
- Specify UserName and password
- Replication UserName: (empty)
- Replication Password: (empty)
- TCP Port: 32568

Buttons at the bottom: Test Connection, Next >, Cancel, Help.

A modal overlay is centered on the dialog with the following content:

- Replicate Alarms and Events**
- Replicate to Wonderware Online**

Estimating Bandwidth

	2014 R2 SP1(11.6 SP1)				
AppServer & Simple Replication	1-Second	5-Second	15-Second	1-Minute	Custom

Analog (Integer, Single Precision) Tags	1,000	2,000	-	-	-
Analog (Double Precision) Tags					
Discrete Tags					
String Tags					
Average string length (bytes)					

String State Summary Tags	-	-	-
States for analog & string summaries	10		
SuiteLink (IDAS)	1-Second	15-Second	1-Minute
Data Frequency (Seconds)	1	15	60
Analog-Integer Tags	-	-	-
Analog-Floating Point Tags	-	-	-
Discrete Tags	-	-	-
String Tags	-	-	-
Store-Forward			
Outages per day		1 instance	
Duration Of Outage		30 minutes	
Network Bandwidth			
Normal Utilization (30% or less recommend)		30%	
Utilization During Store-Forward		50%	
Physical Bandwidth		1,000.0 Mbps	
Engine/Replication Compression	✘	0	0=Off, 1=On
History to keep online			
		36 months	

Enter parameters in cells with a fill color (for tag counts for time/rates for other settings)
 This spreadsheet is for information purposes only and is provided "as is" without warranty of any kind.
 The calculations apply to Historian 2012 R2 - 2014 R2 SP1

Results	
Storage	2014 R2 SP1 (11.6 SP1)
Total Tag Count (License tags may be lower)	4,100 Tags
Overall average rate	1,468 Values/Sec
Total Storage/Day	999.4 Megabytes
Total Storage/Year	364.8 Gigabytes
Total Storage for 3	1,094.3 Gigabytes
Storage IOPS (409	3 IOPS
Recommended block	24 Hours/block
Recommended ev	n/a
Network	
Streaming Load	413.9 Kbps
Bandwidth Required for 30% Utilization	1,379.5 Kbps
Store-Forward Completion Time/Outage	Fast
"Wait to send incomplete packets" setting	2 Seconds

For non-redundant Historians. Double for redundant configurations.
 This is the network load, but the actual required bandwidth will be higher--see next row.

Wonderware Intelligence

- Range Of Users
 - Serious analysis
 - Dashboards for broader use
- Powerful
 - Filtering
 - Layout
 - Grouping
- Powered by “time slicing” engine
 - Spans multiple types of data
 - Integrates with process historians (Wonderware Historian, eDNA, OSISoft PI)
- Supports many different BI tools

Time Series Aggregation: Maximum

10:23

Batch 123, Product X

21:49

Shift	Start	End	Max
A	8:00	14:00	57.2
B	14:00	22:00	61.7

Batch	Product	Start	End	Max
123	X	10:23	21:49	61.7

Which batch had the highest temperature?

Which shift had the highest temperature?

Which shift had the batch with the highest temperature?

Intelligence Time Slicing

Even more value with your Historian data

- Slices data by batch and computes metrics
 - Volume In and Out = Integral for Flow In & Out
 - For each batch
- Gantt chart
 - Each bar represents a batch
 - Color of bar represents Yield (%)

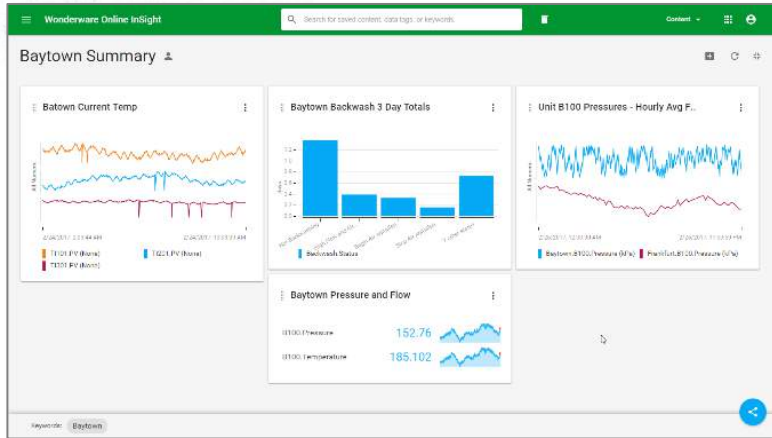

This slide has an embedded video

Dashboard Comparison

InSight

- All data is time-series
- Super-simple, self service
- Independent charts
- Basic layout

Intelligence

- Virtually any data
- Leverages time-slicing engine
- Knowledgeable user enables self-service
- Enables chart interaction
